

The latex-lab-testphase code*

Ulrike Fischer L^AT_EX Project

January 29, 2026

Abstract

1 Introduction

This code implements small files which can be loaded with the `testphase` key of `\DocumentMetadata` and which bundle various testphase modules. This will be extended to allow user to load well defined parts of the tagged PDF project.

Currently the values `phase-I`, `phase-II`, `phase-III` and `new-or` (bundles `new-or-1` and `new-or-2`) are provided. `tagpdf` is an undocumented alias for `phase-II` which is kept for compatibility. The value `math` combines various math related files.

new-or-1 contains the code for header and footer (tagging and suppressing links) and is always loaded

new-or combines all new-or parts (currently 1+2)

```

this is only provided for compatibility

```

56 <*tagpdf>
57 \ProvidesFile{tagpdf-latex-lab-testphase.ltx}

Support for the new output routine code are loaded in phase-II and new-or:

```

63 <*tagpdf | phase-II | new-or>
64 \RequirePackage{latex-lab-testphase-new-or-2}
65 </tagpdf | phase-II | new-or>

67 \RequirePackage{tagpdf}
68 \AddToDocumentProperties [document]{testphase/tagpdf}{loaded}
69 </tagpdf | phase-I | phase-II>

```

```

70 <tagpdf | phase-II>\tagpdfsetup{activate,para/tagging,activate/spaces}
